## Gold Mineralisation Continues in Drill Results on Indochine's Mt Kare Gold/Silver Project, PNG

Gold mineralisation continues in drill results at Indochine Mining's (ASX:IDC) gold/silver project at Mt Kare, in Papua New Guinea (PNG). Recent results include:

### **Drillhole 135SD12:**

**18 metres at 3.0 grams/tonne (g/t) gold, 24 g/t silver** from 18m downhole, and  
**40.6 metres at 3.8 grams/tonne gold, 21 g/t silver** from 102m, which includes  
**2 metres at 31.8 grams/tonne gold, 43 g/t silver** from 136m.

Drillhole 135SD12 was terminated at 142.6m within a gold mineralised interval due to broken ground conditions. An adjacent prior drillhole (MK06-84) had intersected what is interpreted to be the same zone, with results of 112 metres at 5 grams/tonne gold (93-205m), which included 25m at 14g/t gold. Drillhole 177SD12 was targeted to re-drill this zone.

Results from a further 37 drillholes are pending and are expected to be released over the coming months. In total, 427 diamond drill holes (~68,000 metres) have been completed in the project.

The Pre-Feasibility Study (PFS) on the project is due for public release before 28 September, after discussions with the regulatory authorities in PNG.

**Stephen Promnitz, Chief Executive Officer, Indochine Mining Limited**
